**Wiring Diagrams**

**INSTALLATION NOTES**

- **CAUTION** Equipment damage!
  - Actuators may be connected in parallel.
  - Power consumption and input impedance must be observed.

- Actuators may also be powered by 24 VDC.

- Position feedback cannot be used with Triac sink controller.
  - The actuator internal common reference is not compatible.
  - Contact signal may be pulsed from either the Hot (source) or the Common (sink) 24 VAC line.
  - A& B should both be closed for triac source and open for triac sink.
  - For triac sink the common connection from the actuator must be connected to the hot connection.

**APPLICATION NOTES**

- The ZG-R01 500 Ω resistor converts the 4 to 20 mA control signal to 2 to 10 VDC, up to 2 actuators may be connected in parallel.

**WARNING** Live Electrical Components!

- During installation, testing, servicing and troubleshooting of this product, it may be necessary to work with live electrical components. Have a qualified licensed electrician or other individual who has been properly trained in handling live electrical components perform these tasks. Failure to follow all electrical safety precautions when exposed to live electrical components could result in death or serious injury.

---

**Note**

The following points must be taken into account with independent, external wiring:
- All contact between the cables or wires that are introduced and the heating element is to be avoided.
- Where necessary, use cables with sufficient numbers of wires, e.g. so that the heating and the actuator can be supplied separately with voltage.
