

Use of EcoStruxure™ Web Services (EWS) add-on options with SmartStruxure™ solution

Licensing when using EWS to integrate with Schneider Electric products

SmartStruxure solution uses EcoStruxure™ Web Services (EWS) as a common integration method to other systems and services. This announcement clarifies when purchase of the EWS add-on options is required.

EWS add-on options are required to be purchased (per server) when using the EWS interface within the Enterprise Server and Automation Server. The add-on options are *not required* when integrating with the following Schneider Electric systems and services:

- StruxureWare™ Data Centre Expert
- StruxureWare Power Monitoring Expert
- Building Analytics
- Power Manager (part of SmartStruxure solution)
 - Available in select countries
- AdaptiApps custom user apps

The EWS add-on options also do not need to be purchased when using EWS for transition of a legacy system (e.g. Andover Continuum™, TAC Vista™) to a SmartStruxure solution.

In the future, notification of other offers that are excluded from the option purchase requirement will be communicated in the offer announcement or a product announcement.

EcoStruxure™ Web Services (EWS) add-on option part numbers:

As a reminder, these add-on option part numbers can be used for an Enterprise Server or Automation Server. The purchase must specify quantity required (if more than one server is to be enabled).

Part number	Product name	Description
SXWSWEWSX00001	SW-EWS-1	EcoStruxure Web Services (run-time) option – Consume only (no maintenance subscription included)
