Three dimensions of energy and power management savings

control operational costs thus putting profits at risk. Square D PowerLogic® energy and power management systems will help you make the most of your energy by:

Reducing Utility Costs & Increasing Energy Efficiency

Achieve significantly reduced direct consumption-related costs through improved efficiency, lower emissions and more accountability. And if you're a property manager, you can increase the accuracy of energy settlements that can help attract or retain tenants. By simply installing a PowerLogic® power monitoring system, our customers over the past twenty years have reported realizing a 2-4% savings in utility costs-but that's just the "tip of the iceberg" in terms of your potential savings.

Optimizing Equipment Utilization

Avoid or defer capital costs by better utilizing existing electrical infrastructure typically results in another 2-5% savings. By monitoring key points and collecting system loading information, engineering is able to make decisions on a plant's capacity to handle new production lines or to determine if additional distribution equipment is required for a building expansion.

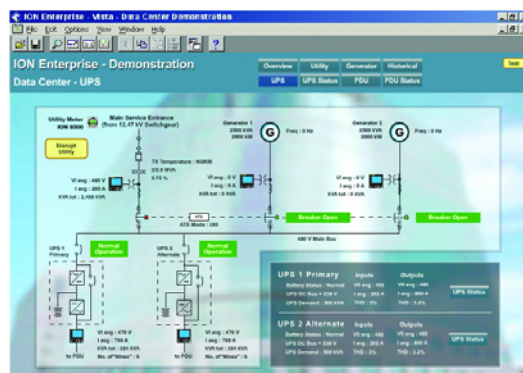

Improving System Reliability & Safety

Typically, another 10% can be found by discovering power system reliability improvements with powerful PowerLogic® metering that offers extremely accurate and high speed event capture information. Once detected, future power disturbances are often correctable and can help facilities avoid expensive and often hidden risks to productivity. As an added benefit, PowerLogic monitoring system information is accessible from the safety of your personal computer. This offers improved worker safety since it is not necessary to suit up in personal protective equipment to access energized equipment over the network.

PowerLogic® systems give you the power to achieve this kind of savings, resulting in a quick return on your investment. We pride ourselves on reliable products, innovative systems, expert engineering services, and our ability to provide single-source energy and power management solutions. It's not just a concept to us, it's a legacy and a promise-for companies that seek an edge in productivity. That's why leaders turn to Schneider Electric.

ION Enterprise Software

System Manager Software

PowerLogic ION Enterprise Software

PowerLogic ION Enterprise software is an all-in-one package for operational power system monitoring, analysis and control that helps you reduce energy-related costs. It offers control capabilities, comprehensive power quality and reliability analysis and helps reduce energy related costs. The software is a suite of applications that allows you to collect, process, analyze, store, and share data across your entire enterprise. PowerLogic ION Enterprise software is designed to give you the information and analysis tools you need to make sound decisions. Its cutting-edge flexibility and compatibility allow you to extend your energy management system at your own pace, adding newer components as they become available, without interrupting or impacting existing functions. PowerLogic ION Enterprise collects data through serial, wireless, modem or Ethernet links and can manage a single site or, through the Internet, connect a global network of devices.

PowerLogic® System Manager Software

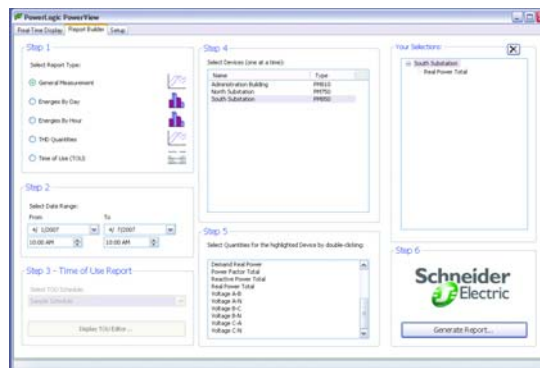

PowerLogic System Manager Software is designed to help control the cost, quality and reliability of your electrical and piped utilities. With a PowerLogic system installed at your facility, you can identify where extra capacity exists, determine if and where the equipment is being overstressed and balance loads on your power equipment. By examining and changing the way you use power, you will save money. System Manager gives access to information so effective decisions can be made concerning utility cost allocation, capital equipment purchases and building improvements. Plus, System Manager is an essential tool for operations personnel to keep systems running before problems occur, using graphical data and early alarm notifications.

Table 4.3: PowerLogic System Manager Software Ordering Information

Extends SMSDL to 32 device limit	SMSDL32U	2575.00
Converts SMSDL to SMSSE	SMSDL2SE	8755.00

PowerLogic Scada Software

Powerview Software

PowerLogic SCADA

PowerLogic® SCADA software was created to meet the requirement for real-time monitoring and control of electrical distribution systems, including fast response times and high reliability through redundancy. PowerLogic SCADA is powered by Citect® SCADA technology but is specifically designed for electrical power systems applications. The complete PowerLogic supervisory control and data acquisition (SCADA) solution includes a dynamic graphical user interface, enhanced alarm management, one second response times for control operation and status, transparent redundancy, and reliable communications (through hardware components and network topology). The system also features Sequence of Events Recorder (SER) logs with time stamps of 1ms resolution. PowerLogic SCADA software includes a web-based client for remote viewing capability. The graphical user interface consists of animated objects which change according to status information. The flexible graphics editor includes both ANSI and IEC electrical symbols to facilitate easy one-line diagram creation. Real-time and historical trending is also supported.

PowerLogic® Powerview™ Software

PowerLogic Powerview is an entry level software designed for monitoring power consumption, allocating cost and performing maintenance of small system applications. With Powerview software, system and device configuration is simple and easy through its automatic device detect and connect feature. The software provides pre-configuration real-time and historical data displays that retrieve onboard data logs from connected devices and performs PC-based logging for devices without onboard memory. The software also features time of use capabilities for reporting energy and demand values over user-specified time periods to satisfy special billing requirements and predefined reports for analysis of energy usage, peak demand power, and more. Custom reports are available too for easy viewing, analysis, sharing with other stakeholders or integrating into existing business platforms.

Table 4.4:

Description	Catalog No.	\$ Price
Powerview Power Monitoring Software	PLVENGUS	2850.00

Personalized dashboards help management and operations personnel monitor all aspects of energy use and respond to opportunities or threats.

Produce aggregate billing, load profile, cost allocation, power quality, forecasting or budget reports to help inform stakeholders and track results against goals.

Use advanced billing functions to support energy procurement and manage load or generation assets in response to curtailment or pricing signals.

Monitor power quality risk factors, benchmark performance, determine impacts, validate contract compliance, isolate problem sources, and confirm your return-on-investment.

PowerLogic ION EEM is a complete enterprise energy management solution that unites business and energy strategies across your entire enterprise by unifying and extending the benefits of your existing energy-related data resources. Stakeholders from management to operations will be empowered by actionable energy intelligence to reveal opportunities, isolate problems and drive cost and risk reduction strategies.

PowerLogic ION EEM automatically acquires data from power monitoring and control systems, building and process automation systems, utility information systems, weather services, spot-market energy pricing feeds, and enterprise business applications, cleanses and warehouses it. Personalized, browser-based dashboards and innovative visualization and modeling tools then make the information available to whomever needs it, so you can accurately monitor, validate, predict and control energy-related expenses.

From operational cost reductions to procurement support through cost allocation, benchmarking and budgeting, key performance indicators and advanced analytics, PowerLogic ION EEM helps you manage energy in financial terms. It also helps you gain unique insight into the impacts of power quality on your business and all energy assets. From the service entrance to the boardroom, PowerLogic ION EEM software allows energy to be managed as a variable cost.

Key features

- True enterprise-level software architecture: data quality assurance, data warehouse, web framework
- Web portal: personalized dashboards, key performance indicators, charts, trends, real-time conditions
- Reporting: rich and customized content, support for complex data and graphics, scheduled distribution
- Trending: advanced visualization, dimensional analysis, prediction, statistical rollups
- Modeling: regression analysis, normalization, correlation, integration of all relevant drivers and contextual data
- Billing: built-in rate engine and rate wizard
- Power quality analysis: wide-area event monitoring, classification, filtering, correlation
- Alarms and events: triggering on complex conditions, notification, logging
- Integration: meters and other devices, weather and pricing feeds, other enterprise applications (e.g. BAC, ERP)
- CO₂ Report

Typical applications

- Manage all utilities (electricity, gas, water, etc.) and emissions through a single, unified interface
- Benchmark facility performance across an entire enterprise to identify energy inefficiencies
- Measure and verify savings from energy conservation projects or performance contracts
- Reduce operational costs, improve processes, and prolong asset life
- Meet corporate environmental stewardship goals or mandated impact targets
- Manage demand control schemes, load shedding, peak shaving, base loading or on-site generation
- Enable participation in real-time pricing and load curtailment programs
- Optimize procurement by forecasting and budgeting for energy needs and comparing utility rates
- Identify utility billing errors and validate contract compliance
- Allocate and recover utilities costs from tenants, departments, processes, etc.
- Maximize the use of existing infrastructure capacity and avoid overbuilding
- Identify and reduce risks to uptime

Data presentation tier

Web portal delivers enterprise-wide access through personalized dashboards, reports, detailed analytics, and integration of views from third-party systems. Information and alerts via cell phone, PDA, pager and more.

Business applications tier

Standard and optional modules tailor functionality to specific needs. Advanced analytics and reporting on every driver and relationship affecting energy cost and reliability.

Data management tier

Integration of data from many sources: power monitoring and control systems (PowerLogic or third party), utility metering systems (water, air, gas etc.), Internet weather, real-time energy pricing feeds, manual input, energy assets (power distribution and reliability equipment, generators), line-of-business systems (BAC, DCS, ERP, EAM, accounting). Data quality module assures complete and reliable data from all inputs.

For price and ordering information, contact your local PowerLogic Sales Specialist or PowerLogic Inside Sales at 1-866-466-7627.

ION8600/7550/7650 Power and Energy Meters

The web-enabled PowerLogic ION8600 is used to monitor electric distribution networks, service entrances and substations. It enables businesses to manage complex energy supply contracts that include power quality guarantees. Low-range current accuracy makes it ideal for independent power producers and cogeneration applications that require the accurate bi-directional measurement of energy. It is well suited to load curtailment, equipment monitoring and control and energy pulsing and totalization applications. Integrate it with PowerLogic ION EEM enterprise energy management software, PowerLogic ION Enterprise operations software or other energy management and SCADA systems.

PowerLogic ION8600 Power and Energy Meter Features

Feature set C includes:

- 9S, 39S, 35S, 36S, 76S socket and switchboard cases
- True RMS 3-phase voltage, current, power and meets stringent ANSI revenue metering standards including ANSI C12.20 0.2 and Class 2, 10, & 20
- Power quality: sag/swell, individual, even, odd, total harmonics to the 31st and symmetrical components
- 2MB log/event memory, min/max for any parameter, historical logs up to 32 channels, timestamp resolution to 0.001 seconds and GPS time synchronization
- Transformer/line loss compensation and Instrument transformer correction
- Communications: Fiber, Ethernet, Serial, Modem, Internet and Ethernet to serial gateway and ION, DNP 3.0, Modbus RTU, Modbus TCP and MV-90 protocols
- Dial-out capability when memory is near full
- Multi-user, multi-level security with control and customized access to sensitive data for up to 16 users
- Data push capability through SMTP (email)
- 65 setpoints — math, logic, trig, log, linearization formulas

- Password protection and anti-tamper seal protection
- Built-in I/O: 4 KYZ digital outs and 3 form A digital ins, an optional external I/O expander provides additional I/O

Feature set B adds the following to feature set C:

- Harmonics - individual, total even, total odd up to the 63rd
- 4MB standard memory
- Historical logs up to 320 channels
- Modbus RTU Master on serial ports
- Cycle setpoint minimum response time

Feature set A adds the following to feature sets C and B:

- Waveform capture up to 256 samples/cycle, PQ compliance monitoring, flicker to EN50160, IEC 6100-4-7/4-15 (also configurable to IEEE 519-1992, IEEE159, SEMI) CBEMA/ITIC
- Transient detection to 65µs at 60Hz;
- Harmonics: magnitude, phase and inter-harmonics to the 40th
- 10MB standard memory
- Max 96 cycles of waveform logs and 800 channels of historical logs

Table 4.5: Typical PowerLogic ION8600 Power and Energy Meter Ordering Configurations

Description	Catalog No.	\$ Price
ION8600, feature set A, 9S socket base, 5A nominal current inputs, auxiliary power pigtail: 65-120Vac/80-160Vdc, 60 Hz, communications card with: 10baseT Ethernet — RS-232/485 — Optical, RS-485	S8600A0C0H6E0A0A	6252.00
ION8600, feature set B, 9S socket base, 5A nominal current inputs, auxiliary power pigtail 65-120Vac/80-160Vdc, 60 Hz, communications card with: 10base T Ethernet — Optical, RS-485	S8600B0C0H6E0A0A	4700.00
ION8600, feature set C, 9S socket base, 5A nominal current inputs, auxiliary power pigtail 65-120Vdc/80-160Vac, 60 Hz, communications card with: RS-232/485, RS-485, Optical port, standard I/O	S8600C0C0H6A0A0A	2609.00

PowerLogic ION7550 and ION7650 Power and Energy Meters

Used at key distribution points and sensitive loads, the web-enabled PowerLogic ION7550 and PowerLogic ION7650 meters combine a wealth of advanced features from power quality analysis capabilities, revenue accuracy and multiple communications options, through web compatibility, and control capabilities. Both are compatible with PowerLogic ION EEM enterprise energy management software, PowerLogic ION Enterprise operations software can be integrated with other energy management or building control systems through multiple communication channels and protocols.

The meters are ideal for compliance monitoring, disturbance analysis, cost allocation and billing, demand and power factor control and equipment monitoring and control. The meters have a high visibility, adjustable front panel display that can depict TOU, harmonics, event logs, phasers, and instantaneous power parameters. They meet stringent ANSI C12.20 0.2, Class 10 & 20 revenue metering standards.

PowerLogic ION7550 and ION7650 Power and Energy Meter Features

The PowerLogic ION7550 includes:

- 3.5" x 4.5" (87 x 112 mm) backlit LCD display
- True RMS 3-phase voltage, current, and power that meets stringent ANSI C12.20 0.2, Class 2, 10, & 20
- Power quality: sag/swell, harmonics - individual, even, odd, total to the 63rd, waveform capture at 256 samples/cycle
- 5MB log/event memory (10MB optional), waveform logging up to 96 cycles, up to 800 channels historical, min/max, timestamp resolution to 0.001 seconds, GPS time synchronization and historical trends through front panel
- Communications: fiber, Ethernet, serial, internal modem, optical port, and a gateway functionality, ION, DNP 3.0, Modbus RTU - master & slave, Modbus TCP and MV-90
- Dial-out capability when memory is near full
- Data push capability through SMTP (email)

- Multi-user, multi-level security with control and customized access to sensitive data for up to 16 users
- 65 configurable _ cycle setpoints for single, multi-condition and dial out on alarm and math, logic, trig, log, linearization formulas
- Password protection and anti-tamper seal protection enhance meter security
- Extensive standard I/O includes: 8 digital inputs, 4 digital outputs and 3 onboard relays

The ION7650 has all the features of the ION7550 and adds:

- Waveform capture up to 1024 samples/cycle
- Transient detection to 17µs at 60Hz
- Harmonics: magnitude, phase and inter-harmonics to the 40th
- Flicker to EN50160 and IEC 6100-4-7/4-15 (also configurable for IEEE 519-1992, IEEE159, SEMI), plus CBEMA/ITIC
- Symmetrical components

Note: Please refer to powerlogic.com for the most complete and up-to-date list of feature availability. Some features are optional.

Used in diverse applications such as feeder monitoring and sub-metering, the PowerLogic ION7300 series meters are also suitable for high-accuracy power and energy metering, bill verification, cost allocation and billing, demand and power factor control, load studies, circuit optimization, equipment monitoring and control and preventative maintenance. They are ideal replacements for analog meters, with a multitude of power and energy measurements, analog and digital I/O, communication ports and industry-standard protocols. The ION7330 meter adds on-board data storage, emails of logged data and an optional modem. The ION7350 meter is further augmented by more sophisticated power quality analysis, alarms and a call-back-on-alarm feature. They are compatible with PowerLogic ION EEM enterprise energy management software, PowerLogic ION Enterprise operations software or can be integrated with other energy management or building control systems through multiple communication channels and protocols.

PowerLogic ION7350, ION7330 and ION7300 Power and Energy Meter Features

The PowerLogic ION7300 includes:

- Multiple form factors: transducer integrated and remote display models, GE S1 or ABB FT21 switchboard forms
- True RMS 3-phase voltage, current, and power that meets stringent ANSI C12.16, Class 10
- Power quality: harmonics - individual, even, odd, total to the 15th, maximum 32 samples/cycle
- Communications: 1 RS-485 port, 1 optional Ethernet port, 1 ANSI Type 2 infrared optical port, 1 PROFIBUS DP port (ION7300 only), onboard web server
- Supported protocols include: ION, Modbus RTU slave on serial, modem, I/R ports, Modbus TCP through Ethernet
- Extensive standard I/O includes: 4 analog inputs, 4 analog outputs, 4 digital relay outputs
- Minimum/maximum recording

The ION7330 adds the following features:

- Time of use - multi-year scheduling, hourly activity profiles
- 4 digital inputs for status monitoring and pulse counting
- Communications: a second RS-485 port, internal modem, DNP 3.0 through serial, modem and I/R ports, EtherGate and ModemGate, data/alarms via e-mail and MV-90 on serial and Ethernet ports
- 12, one second setpoints for single, multi-condition alarms, plus math, logic, trig, log, and linearization formulas
- Non-volatile onboard memory capacity of 300kb, min/max logging, min/max logging, up to 32 channels of historical logs, timestamp resolution to 0.001 seconds

The ION7350 includes the following additional features:

- Power Quality: sag/swell, individual, even, odd, total harmonics up to 31st, maximum 64 samples/cycle
- Up to 96 channels of logs and up to 48 cycles of waveform logs
- Alarm notifications via e-mail

Integrated display with optical port, 5A inputs, standard power supply, standard comms, (one RS-485 port)	S7300A0B0B0A0A0A	1436.00

The modular PowerLogic ION6200 is a low-cost, ultra-compact meter that offers outstanding versatility and functionality. It is simple to use, and has a big, bright LED display. It offers four-quadrant power, demand, energy, power factor and frequency measurements, and is available in a variety of flexible configurations. It is available as a low-cost base model to which enhanced functionality can be added over the long term. The PowerLogic ION6200 is ideal for customers who need revenue-accurate and/or certified measurements and want easy integration with power distribution assemblies and building automation systems. A Megawatt version is available for applications requiring readings in megawatts and kilovolts. It is well suited for sub-metering, energy cost tracking load profiling, and substation panel metering and is an ideal replacement for analog meters. It can be used for stand-alone metering in custom panels, switchboards, switchgear, gensets, motor control centers and UPS systems.

The meter consists of a base unit with options card and a power supply pack, with a remote display being optional.

PowerLogic ION6200 Power and Energy Meter Features

- Only two inches deep, and fits a standard ANSI four-inch switchboard cutout, or as a TRAN model with no display and can be fastened to a flat surface with a 4" (10cm) ANSI bolt pattern or mounted to a DIN rail. A remote display module (RMD) can be ordered for the TRAN and mounted through an ANSI 4" (10cm) and DIN 96 cutout.
- LED display with twelve 3/4" (19mm) high digits that display all basic power parameters
- Pulse Outputs: optional kWh, kVARh and/or kVAh pulsing
- Via two Form A outputs
- Communications: optional RS-485 port with Modbus RTU and ION compatible
- 64 samples per cycle true RMS
- 3-phase voltage and current inputs

The standard ION6200 is available with the following parameters:

Voltage L-N average and per phase, Voltage L-L average and per phase, Current average and per phase

Option EP#1, includes the standard measurements and provides the following additional parameters:

I4, kW/mW total, kWh/mWh total, kW/mW peak, Current demand average and per phase, Current peak demand average and per phase, Power factor total

Optional Enhanced Package, includes the standard measurements and provides the following additional parameters:

kW/mW per phase, kVAR/mVAR total and per phase, kVA/mVA total and per phase, kWh/mWh and del/rec per phase, kVARh/mVARh total and del/rec per phase, kVAh/mVAh total and per phase, kW/mW demand, kVAR/mVAR demand and peak, kVA/mVA demand and peak, Power Factor per phase, Voltage THD per phase, Current THD per phase

Series 700 Power Meter

PowerLogic Series 700 Power Meter

The PowerLogic PM700 series power meters offer all of the measurement capabilities required to monitor an electrical installation in a single 96 x 96 mm unit extending only 50 mm behind the mounting surface (less than 2 inches).

With its large display, you can monitor all three phases and neutral at the same time. The anti-glare display features large 11 mm high characters and powerful backlighting for easy reading, even in extreme lighting conditions and viewing angles.

- Panel instrumentation (OEMs)
- Sub-billing and cost allocation
- Remote monitoring of an electrical installation
- Harmonic monitoring (THD)

Power and current demand, THD and min/max reading in basic version

A high-performance solution for trouble-free monitoring of your electrical installation.

Energy Class 1 as defined by IEC 62053 (or IEC 61036)

Suitable for sub-billing and cost-allocation applications.

PM710 Power Meter with integrated display and comms	PM710	710.00
PM750 Power Meter with (2) digital input, (1) digital output	PM750	950.00

Series 800 Power Meter

PowerLogic Series 800 Power Meters

The PowerLogic PM800 series Power Meter is a high-performance power-monitoring unit able to provide advanced power measurement capabilities in a compact 96x96 mm unit. Its large, easy to read display allows you to monitor all three phases and neutral simultaneously. With its easy to use intuitive interface and self guiding menus, the large anti-glare and back lit display makes this meter the easiest yet to navigate and use. The modular design allows for flexibility with an easy upgrade path to grow the meter's capabilities with the addition of Communication and I/O Modules.

- Monitor current, voltage, power and energy simultaneously
- Trending/Forecasting Curves functionality (PM850/870)
- 128 samples/cycle-zero blind metering
- Waveform capture (PM850), configurable waveform capture (PM870)
- Onboard logging (80k in PM820, 800k in PM850/PM870)
- Detection of sub-cycle sags/swells on both voltage and current
- Individual harmonics up to 63rd on both current and voltage
- Available with 2 standard Digital I/O
- Field installable Digital and Analog I/O
- THD measurement
- Meets IEC 60687, IEC 62053 and ANSI C12.20 Class 0.5S accuracy
- Programmable (logic and mathematical functions)
- Optional field installable Ethernet communications card with standard and custom web pages
- GPS Time Synchronization (PM870)

PowerLogic Series 3000 Circuit Monitor

The PowerLogic Series 3000 Circuit Monitor is designed for industrial, commercial and OEM users and is the ideal monitoring device for electrical mains, branch feeders, as well as OEM applications, such as computer power. It provides instant access to real time web pages without installing or learning special software.

CM3000 can serve up instantaneous readings, energy usage cost, power quality and disturbance analysis or even customized web pages. Web-access summary data transparently from other devices connected downstream.

- Comes with 8Mb of standard memory allowing for more data logging than any other meter in its class
- 128 samples/cycle allow for zero blind metering
- Sag/Swell disturbance monitoring (CM3350)
- 100 ms Event recording (CM3350)
- Harmonic Powerflows to the 40th harmonic
- Sequence of events recording using GPS synchronization
- Built-in Trending and Forecasting functionality allows you to forecast energy usage up to 4 days in advance
- Custom web pages with optional Ethernet Communications Card
- Field installable Digital I/O card
- Meets IEC 60687 and ANSI C12.20 Class 0.5S accuracy

Table 4.12:

NOTE: See page 4-11 for Series 3000 Accessories

Series 3000 Power Meter

PowerLogic Series 4000 Circuit Monitor

The award winning, Web-enabled PowerLogic Series 4000 Circuit Monitor (CM4250) is the most advanced permanently mounted circuit monitor in the industry today. Designed for critical power and large energy users who cannot afford to be shut down, the CM4250 provides the ability to monitor, troubleshoot and preempt power quality problems. Transients (disturbances lasting less than one cycle) are particularly difficult to detect, due to their short duration. The CM4000T detects and captures oscillatory and impulsive transients (up to 10,000V peak, line-to-line at 5 MHz per channel) as short as one microsecond in duration. The CM4000T automatically performs a high-speed transient waveform capture and a longer disturbance capture to show the conditions surrounding an event. The CM4000T maintains a complete historical record of the number of transients per phase, along with the magnitude, duration and time of occurrence of each. It also performs a stress calculation to determine the circuits that have received the greatest stress from transient overvoltages.

CM4000T with VFD Display

PCM4000

- Waveform capture with up to 512 samples/cycle
- Built-in Trending and Forecasting functionality allows you to forecast energy usage up to 4 days in advance
- Sag/Swell disturbance monitoring
- Two option card slots for field installable cards
- Optional field installable Ethernet communications card with standard and custom web pages
- Alarm Setpoint Learning feature allowing optimum threshold setting (patent pending)
- Multiple alarms including standard, digital, Boolean, high-speed, and disturbance alarms
- Waveshape alarm monitoring
- High speed transient voltage detection at 5 MHz per channel with field installable CVMT current/voltage module
- True RMS Metering through the 255th harmonic
- Also available in a rugged sealed case as a Portable Circuit Monitor
- Extended waveform capture (up to 110 seconds)
- Field installable Digital/Analog I/O cards and flexible I/O extender modules
- Harmonic powerflows up to the 40th harmonic
- Standard KYZ pulse output
- Standard 32 MB of non-volatile memory
- Integrated power quality standards including EN50160, IEC 61000-4-15 (Flicker)
- Sequence of events recording using GPS synchronization technology
- Oscillatory transient detection and recording
- Extended range current/voltage module(CVMXR) for higher inrush currents available, field installable
- UL Listed, CSA Approved, CE Marking, NOM Approved, FCC compliant

PowerLogic Series 4000 Circuit Monitor Optional Displays

- High visibility remote VF (vacuum fluorescence) display
- Displays metering data, min/max values, alarms, inputs
- Remote LC (liquid crystal) display with backlighting also available
- Optional user configurable display screens

PowerLogic Submetering

In today's increasingly competitive commercial property market, attracting and retaining high-quality, long-term tenants by offering exceptional value is the primary goal. Balancing these premium services and reliable infrastructure vs. the financial exposure to volatile utility costs is the challenge.

Minimizing energy costs requires information on how energy usage translates into money spent. PowerLogic energy sub-metering systems are specifically engineered to address the measurement, verification and billing needs of multi-tenant properties.

- Residential high-rise and low-rise
- Campuses
- Shopping centers
- Malls / food courts
- Offices
- Commercial buildings

PowerLogic energy management and metering systems are ideal for multi-tenant buildings providing:

- Metering & Verification tools to assure compliance to Energy Policy Act 2005
- Integrated approach from simple energy allocation requirements to high-end power quality
- Monitor energy usage and efficiency to accurately recover the costs while providing tenants with energy and a reliable infrastructure
- Implement energy efficiency initiatives essential to obtaining LEED certification

Tenant Metering Software Solutions

PowerLogic Tenant Metering Commercial Edition Software (TMSCE) allows you to allocate and recover the true cost of your facility's utilities. TMSCE is designed to offer a broad range of functionality for more demanding commercial billing applications providing the flexibility necessary to manage a wide range of tenants, multiple locations and comprehensive utilities.

Table 4.16:

Description	Catalog No.	\$ Price
PowerLogic Tenant Metering Commercial Edition Software	TMSCE	5880.00

PowerLogic E5600 Socket Meter

The E5600 is a cost effective socket meter that combines high accuracy, superior quality and wide-ranging capability in a device that is simple to install. The PowerLogic E5600 socket meter can help reduce electrical costs, increase property values and attract good tenants by providing the information needed to manage energy costs. Track and allocate costs by circuit or suite, accurately bill tenants for energy used, and verify energy conservation efforts. It is a foundational component for LEED and Energy Star certification as a part of green buildings. Green buildings enjoy higher tenant retention, higher tenant quality, and recognition by the community while typically allowing property managers to charge more for rent.

Unlike traditional sub-metering solutions, which must be manually read or may lack software for effective sub-billing or comprehensive energy management, the PowerLogic E5600 enables businesses to utilize their existing S-based socket infrastructure with a low-cost meter that is part of an end-to-end solution for tenant sub-metering.

- Real, reactive, and apparent energy values.
- Onboard interval data logging (load profiles).
- Revenue grade accuracy – ANSI C12.20 0.2% / 0.5%.
- Automatic configuration of service type and voltage.
- Onboard diagnostics continually monitors for equipment failures, improper installation wiring, poor load conditions, poor power quality conditions and tampering.
- S-base meter socket compatible.

High Density Metering factory assembled enclosure for multi-tenant properties

8 meter configuration

16 meter configuration

PowerLogic High Density Metering

High Density Metering (HDM) is engineered to answer the metering and billing needs of multi-tenant properties:

Features and Benefits

- HDM comes standard with the PowerLogic PM210, PM750 or ION6200 meters. Please consult the factory to discuss cabinets equipped with the PowerLogic PM800 series meters.
- Lockable, 16 gauge NEMA Type 1 enclosure provides tamper-resistant security.
- NEMA Type 3R also available. Please consult factory.
- Mounting channel and surface-mount flanges simplify installation.
- Factory installed cover plates are included to cover empty meter spaces.
- Factory installed wiring harness simplifies installation of additional meters and provides future system expansion.
- Each High Density Metering cabinet is provided with standard RS485 Modbus®, and optional Modbus Ethernet TCP communications are available. For wireless communications, please consult factory.
- Available in the following configurations: 208Y/120V wye; 240V delta, 48 = 480Y/277V wye (PM210/PM750), and with provided 2.5:1 CPT (control power transformer); 480Y/277V wye (6200); 480V delta (6200, PM210 or PM750).
- CTs required. Must select separately.

Table 4.17: High Density Metering Cabinet

400 Amp HDM Solid Core Current Transformer, 1.13" window size	HDMCT400S1	52.00

Multi Circuit Energy Meters

The PowerLogic E4000 series multi-circuit energy meters combine accurate electricity sub-metering with advanced communications technology. They are ideal for multi-tenant or departmental metering applications within office towers, condominiums, apartment buildings, shopping centers and other multi-point environments, metering up to 24 individual circuits from the same meter. The E4800 series has a system accuracy of 0.5% for power and energy, including the metering class CTs. Each meter is available separately or as part of a Square D integrated power center (IPC) for use in building retrofits or new construction.

Table 4.19:

Description	Catalog No.	\$ Price
Energy measurement for 24 (1CT) or 12 (2CT) single-phase circuits or 8 (3CT) 3-phase circuits; Ethernet; modem; onboard interval logging; compatible with 80mA low-power CTs (solid-core)	E488010SQD	Consult Factory for Pricing
Energy measurement for 24 (1CT) or 12 (2CT) single-phase circuits or 8 (3CT) 3-phase circuits; Ethernet; modem; onboard interval logging; compatible with 333mV low-power CTs (solid-core or split-core)	E483310SQD	Consult Factory for Pricing
Energy measurement for 24 (1CT) or 12 (2CT) single-phase circuits or 8 (3CT) 3-phase circuits; Ethernet; modem; onboard interval logging; compatible with standard 5A CTs (solid-core or split-core)	E480510SQD	Consult Factory for Pricing
200A current transformer (CT), 80mA secondary, solid-core (1 CT)	ECT80200	Consult Factory for Pricing

800A current transformer (CT), 80mA secondary, solid-core (1 CT)	ECT80800	Consult Factory for Pricing

Energy Meter

PowerLogic Energy Meter

The Energy Meter is ideal for stand-alone and systems-based submetering applications. It is easy to install and provides exceptional metering accuracy. Available in Basic and Extended Range models. The Basic model is designed for metering of 120/240 and 208Y/120 volt services. The Extended Range model will meter 120/240 volt up to 480 volt Wye connected services. Extended Range meters come with pulse output and phase loss output not available on the Basic unit. Optional Modbus® RS-485 serial communications are provided with the Energy Meter Comms Board, EMCB. Optional kW demand is also provided by the EMCB.

Meter up to 3 individual services with one Energy Meter. The Energy Meter will allow the addition of up to 3 sets of parallel CTs for metering multiple electric loads. Additional sets of CTs can be ordered separately. Please refer to the multiple CT application notes in the Energy Meter instruction bulletin for the proper installation procedures.

▲ Energy Meter communication board (EMCB) can be used with all models of the Energy Meter. Order one EMCB for each Energy Meter where either kW demand and/or communication is specified.

PowerLogic Enercept® Meter

The Enercept Meter is the ideal solution for submetering electric loads where space is at a premium. The compact design consists of three interconnected split-core CTs with the metering and communication electronics built into the CT housing. Simply snap on the CTs, connect the voltage inputs, the communication lines, and installation is complete. Both versions can be connected to either three-phase or single-phase circuits.

Enercept meters employ the Modbus® RTU 2-wire communication protocol, and can utilize the same communication network and PowerLogic System Manager™ software as other PowerLogic devices. Data from the Enercept meters can be presented in tabular or graphical format, used for alarming and historical logging and trending, and to produce reports.

Optional Enercept Display Interface acts as a stand-alone operator interface supporting up to 32 meters (63 with a repeater). In addition, the EDI can act as a network adapter allowing Enercept meters to be incorporated into a 4-wire network. The Enercept Network Adapter (ENA) is designed to act as a network adapter, allowing the Enercept meters to be integrated into a PowerLogic 4-wire network. The ENA converts the signals from the 4-wire network to the 2-wire network, as well as changing the parity between the two networks.

PowerLogic Split Core Current Transformers-Instrument Grade 5 Amp Split-Core Current Transformers

The 3090 SCCT series of split-core current transformers provide secondary amperage proportional to the primary (sensed) current. For use with Circuit Monitors, Power Meters, data loggers, chart recorders and other instruments the 3090 SCCT series provides a cost-effective means to transform electrical service amperages to a 0-5A level compatible with monitoring equipment.

Table 4.27:

Catalog No.	Description	\$ Price
3090SCCT022	Split Core CT - 200A (sz.2): 1.25" x 1.51	120.00
3090SCCT032	Split Core CT - 300A (sz.2): 1.25" x 1.51	120.00

3090SCCT083	Split Core CT - 800A (sz.3): 2.45" x 2.89	129.00
3090SCCT084	Split Core CT - 800A (sz.4): 2.45" x 5.05	137.00
3090SCCT124	Split Core CT - 1200A (sz.4): 2.45" x 5.50	160.00
3090SCCT164	Split Core CT - 1600A (sz.4): 2.45" x 5.50	165.00

Note: Max. Voltage without additional insulation 600Vac. Do not apply 600V Class current transformers to circuits having a phase-to-phase voltage greater than 600V, unless adequate additional insulation is applied between the primary conductor and the current transformers. Square D assumes no responsibility for damage of equipment or personal injury caused by transformers operated on circuits above their published ratings.

SA Split-Core Current Transformers

BCM42

PowerLogic Branch Circuit Power Meter

The Branch Circuit Power Meter (BCPM) is ideal for data center customers who are focused on eliminating costly downtime, managing existing capacity efficiently, and reducing energy cost. The BCPM helps data center managers by providing alarms that signify potential issues within the power system and supplying power and energy data down to the circuit level. This data can indicate areas with over-used or under-used within the facility. It can also be used to effectively control energy cost.

The BCPM can monitor up to 84 circuits and fits any Power Distribution Unit (PDU) or Remote Power Panel (RPP) with minimal space requirements. It has a wide monitoring range allowing customers to monitor circuit current from 0.25A to 100A with high accuracy (3% for current 0.25A to 2A and 2% for current 2A to 100A). It can also measure power and energy readings at the circuit level as well as the incoming main. This eliminates the need for two different meters. The BCPM also has a flexible numbering scheme which allows customers to match that of the PDU or RPP and field configuration adds ease to either a new or a retrofit installation.

Key features:

- Full PDU monitoring
- Flexible configuration
- Wide monitoring range
- Low current monitoring
- Advanced alarming
- Cost effective communications
- Easily integrates into a PowerLogic system or other existing networks using Modbus® communications

PowerLogic Branch Current Monitor

The Branch Current Monitor reports the current level of each of the breakers of a panelboard to provide timely circuit loading information. In addition, as the circuit load approaches one of two user set levels, an alarm can be generated back to the monitoring software such as PowerLogic System Manager Software. Four models of the Branch Current Monitor are available. The BCM42 consists of rail mounted solid-core CTs intended for mounting inside new panelboards or complete panel retrofits. The BCM42SR is designed to fit into a column width panel design. The BCMSC model is made up of split-core CTs that are an ideal solution for retrofit applications in existing panelboards. The BCMSC __ H is a 100 Amp version of the split core design.

Table 4.29:

Catalog No.	Description	\$ Price
BCM42	Branch Circuit Monitor 42 circuits, 3/4" center line CT spacing, 10–50 Amp range, configurable	2350.00

BCMSC42H	Branch Circuit Monitor, 100 split core, 42 CTs	4950.00

Note: CT hole size accommodates up to #6 THHN insulated conductor.

PowerLogic Multi-Circuit Meter

Designed for OEM style placement in electrical distribution equipment the MCM8364 is configurable to meter 1 or 3 phases of up to eight individual loads, six loads if neutral monitoring is required. The MCM will monitor up to 10,000 amps per service using standard 5 Amp CTs. All of the metered circuits must share a common voltage source. The MCM8364 is a great solution for monitoring critical power distribution equipment and provides 24 different electrical metering quantities plus an additional nine Modbus register alarms.

With one RS-485 connection, the multi-circuit meter provides Modbus RTU communications output that communicates to each individual metered circuit. Up to 30 multi-circuit meters can be addressed on the same Modbus network. The multi-circuit meter can provide warnings to the central monitoring computer via its Modbus output using the MNode software provided or can be integrated into PowerLogic SMS software. The MCM also works with the submeter display as shown below.

Electrical Data:

Energy Consumption (kWhr), Real Power (kW), Reactive Power (kVAR), Apparent Power (kVA), Power Factor Total, Voltage, L-L, avg. of 3 phases, Voltage, L-N, avg. of 3 phases, Current, average of 3 phases, Real Power (kW) phase A, B, & C, Power Factor, phase A, B, & C, Line to Line Voltage, phase A-B, B-C, A-C, Line to Neutral Voltage, phase A-N, B-N, C-N, Current, phase A, B, & C, Frequency (measured from phase A) (Hz).

Modbus Alarms:

Over Voltage, Under Voltage, Over Current, Under Current, Over kVA, Under kVA, Phase Loss A, Phase Loss B, Phase Loss C

PowerLogic Submeter Display

The PowerLogic Submeter Display (SMD) is a comprehensive electrical submetering display that provides a view of electrical parameters from multiple metering products with one networked LCD. In addition to viewing system data on the display itself, you can also view data on a remote PC via a network connection. Touch pad buttons provide a convenient way to view downstream devices on the power-monitoring network. The display is RS-485 Modbus RTU compatible. It has additional RS-485 and RS-232 Modbus ports for networking to additional displays or to a master PC. The submeter display is compatible with the following metering devices: BCM, MCM, & Enercept® meters.

Submeter Display

With the flexibility of ION technology, multiple form factors, extensive I/O, and an unmatched feature set, the PowerLogic ION8600 is a powerful device in substation automation, SCADA, and billing applications.

Multi-port, (serial, optical, internal modem, Ethernet) plus multi-protocol communications (Modbus RTU, Master, Slave, DNP 3.0, Modbus TCP) and a unique gateway capability provide industry leading integration capability

PowerLogic Solutions for Utilities

Square D® PowerLogic delivers complete, cutting-edge web-enabled solutions for many of the utility industry's most demanding metering, billing and information management challenges. For many years, regulated utilities, ESCOs and deregulated energy providers have utilized our proven, scalable meters and software to obtain the accurate, real-time information they need to meet their organization's business goals.

Cost-effective PowerLogic systems enable energy providers to:

- Maximize competitiveness, increase reliability, streamline operations, and improve service
- Manage wholesale energy transactions across wide geographical areas
- Provide value-added services that enhance customer relationships
- Improve revenue metering, billing accuracy and ensure and report on regulatory compliance
- Provide key personnel with energy information to make analytical and strategic business decisions, optimize distribution assets, and profit from free market opportunities

PowerLogic's advanced revenue meters are high quality, flexible and scalable devices that offer a combination of capabilities unmatched in the industry. Whether integrated with third-party systems or combined with compatible PowerLogic software, Square D can help utilities address:

Transmission grid and revenue metering

PowerLogic provides high-accuracy meter information for grid-wide billing applications and offers MV-90 support and integration into SCADA.

Substation monitoring

A PowerLogic solution provides the tools to protect valuable equipment from faults, disturbances, and overloading.

Power quality analysis

Waveform recording, transient detection, sag/swell, symmetrical components and many more additional capabilities are available when combined with PowerLogic ION Enterprise software.

Service entrance metering

The PowerLogic ION8600 billing meter can be used to manage electricity contracts for energy suppliers and consumers, plus web reporting, sub-metering services, load management and much more.

Demand response and load curtailment

PowerLogic meters and software can also be used as part of a demand response/load curtailment system.

Square D PowerLogic utility solutions resist obsolescence and are engineered to provide fast payback and easy scalability so you can add metering points and communications channels as your organization evolves.

PrimeRead Software

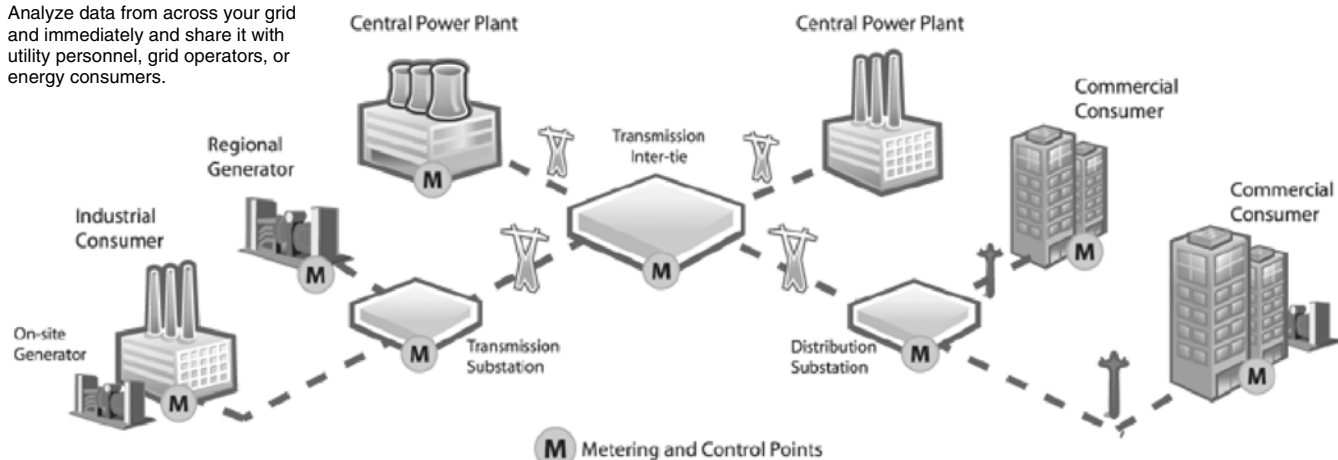

PrimeRead software is a multi-vendor, automated data collection software for utilities that makes data exchange with corporate IT systems for billing, operations and customer information fast and easy. PrimeRead software offers more than just large-scale data acquisition from commercial and industrial (C&I) metering devices though. It provides communications network flexibility, configurable data validation and a true Windows interface.

Typical applications

- Implement C & I data collection with more flexibility, scalability and reliability
- Enable meter data management for AMI
- Perform validation, estimating and editing

For price & ordering information, contact your local PowerLogic Sales Specialist or PowerLogic Inside Sales at 1-866-466-7627.

Analyze data from across your grid and immediately and share it with utility personnel, grid operators, or energy consumers.

PowerLogic Energy Profiler Online (EPO) is a web-hosted service that is the industry's foremost load data visualization and analysis application. This flexible, easy to use system turns customer usage data into actionable information, freely accessible to all customers and internal users. For commercial and industrial energy customers, managing energy costs is the primary objective, but they can't control what they can't measure. EPO enables energy customers to take control of their costs by providing the information they need to understand how their organization uses energy. They can then take steps to reduce costs by implementing conservation measures, investing in more efficient equipment, or participating in new pricing or load curtailment programs.

For the utility, EPO provides an intuitive, easy-to-maintain tool for better understanding customer usage patterns and meeting customers' growing need for information. It also provides a convenient platform from which to administer real-time pricing (RTP) or load curtailment programs. EPO's instinctive online functionality gives first-time users an extremely short learning curve, while its powerful configuration options address the needs of more sophisticated users. The service is available to users at their convenience, 24/7, and regular updates ensure that customers get the most current information.

- Data access and analysis
- Automated reporting
- Estimated bills and rate comparisons
- Demand response and curtailment programs
- RTP programs
- Alarming
- Administration tool

- Energy load analysis
- Energy budgeting and bill forecasting
- Demand response and load curtailment program management
- Real-time pricing program management
- EPO's Real-Time Pricing module lets users see interval data for accounts with future pricing information, and multiply that data against a price stream.

For price & ordering information, contact your local PowerLogic Sales Specialist or PowerLogic Inside Sales at 1-866-466-7627.

Communications for high-speed access to critical information

From a single building to a multi-site enterprise, PowerLogic Web-Enabled Network Components provide fast, reliable serial to Ethernet connectivity in the most demanding applications:

- Energy management
- Power distribution
- Building automation
- Factory automation

PowerLogic Ethernet Gateways are available in two models—EGX100 and EGX400 - providing direct connection to Ethernet-Modbus®/TCP networks to make energy and power monitoring information available over local and wide area networks.

- The EGX100 provides low-cost, reliable, Ethernet to serial-line connectivity in a compact, DIN-rail mounted package. Enabled by Power over Ethernet (PoE IEEE 802.3af), the EGX100 simplifies installation by eliminating the need for power supplies plus provides a Web-based interface for configuration and diagnostics.
- The EGX400 has two serial ports providing Ethernet access to 64 serial devices (more with repeaters) and includes the ability to e-mail historical data plus provide browser-based access to real-time and historical interval data logging/trending information allowing electrical distribution systems to be better managed by utilizing Ethernet and Internet technologies.

Advantages

- Easy to setup—No special software required. Configuration via Microsoft Internet Explorer or Hyperterminal.
- Easy to troubleshoot—Detailed diagnostics for communication ports through a Web interface.
- Easy to maintain—Field upgradable firmware lets you add new features while reducing costly downtime.
- Secure—Customizable, password-protected access to configuration.
- Cost-effective, high-speed communications—Use existing LAN infrastructure to reduce communications wiring and network management costs.
- Open platform provides broad connectivity—Modbus TCP/IP over Ethernet allows transparent access via intranet/internet. Each gateway supports up to 32 Modbus or PowerLogic protocol devices.
- Subnet initiated communications—The gateway supports a slave mode for connecting a serial-line based system to Ethernet. For example, a building management system with a Modbus serial interface can route to 16 remote Modbus TCP/IP interfaces supporting up to 128 serial-line devices.
- Extended temperature range—-25 to 70°C enables operation in harsh environments.

Table 4.32:

Type	EGX100	EGX400
	\$ Price	
	950.00	2460.00
Control Power		
24Vdc control power (from external source)	x	x
Power Over Ethernet	x	
Protocols		
Ethernet: HTTP, FTP, Modbus TCP/IP, SMTP, SNMP (MIB2), SNT, TCP, UDP, ICMP, ARP	x	x
Serial: Modbus RTU, Modbus ASCII (EGX100 only), JBUS, PowerLogic (SY/MAX)	x	x
Ports		
Serial: RS485		1
Serial: RS232/485 configurable	1	1
Ethernet UTP (10/100)	1	1
Fiber (100Mb)		1
Integral web server		
Web page generation tool		x
Maintenance/diagnostics	x	x
Gateway administration setup	x	x
Comprehensive meter reading		x
Interval logging/trends		32 devices
User defined custom pages		x
Historical Data Logging		
Interval data		x
File transfer on scheduled basis		email
Export to Excel via web query		x
Manual FTP		x

PowerLogic WebPageGenerator

The PowerLogic WebPageGenerator (WPG) creates and downloads application specific web pages to PowerLogic Ethernet gateways (EGX400, ECC21, PM8ECC) with minimal user intervention. The user simply identifies the serial devices connected to the Ethernet gateway in this wizard-based software utility. The utility takes care of the rest. This utility is available for download from www.powerlogic.com.

EGX100 Ethernet Gateway

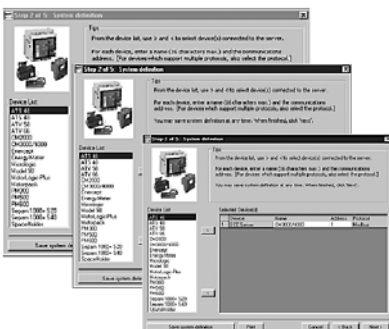

EGX100 lets the Administrator assign access to setup pages by user groups

Built in tabs provide easy DIN rail mounting solution.

EGX400 Ethernet Gateway offers you a "window" into your power equipment

Consulting & Analysis

Power System Engineering

The Square D Power System Engineering team offers a wide range of engineering services to improve the safety, efficiency and reliability of your power distribution system. The team is comprised of registered professional engineers, safety trained and equipped, to perform a variety of engineering functions.

Power System Studies

The Square D Power System Engineering Team provides expertise for a variety of electrical power system studies. Some of the more common system studies include...

- Short-circuit analysis
- Time-current coordination
- Motor starting/voltage drop
- Motor starting/torque-speed
- Safe motor re-energization
- Harmonic analysis
- Transient analysis
- Power factor correction analysis
- Other system specific analysis

Arc Flash Analysis

Square D offers on-site services to perform arc flash analysis for a facility, complex, office, or campus. An Arc flash analysis is used to determine ...

- Flash Protection Boundary
- Incident Energy Value
- Hazard/Risk Category
- Appropriate Personal Protective Equipment (PPE)
- Low cost arc flash reduction methods

Features of Square D arc flash analysis include...

- Time current coordination analysis showing both existing and recommended over/current device settings
- Short-circuit study to ensure adequacy of equipment
- Onsite verification and documentation of equipment
- Arc flash labels (populated with the results of the arc flash analysis)
- Arc flash label affixation
- NFPA 70E—Safe Workplace Practices Training provided by OSHA authorized outreach instructors
- Recommendations and solutions to reduce potential arc flash hazards

Power Quality Studies

Square D offers onsite power quality engineering studies and solutions to eliminate process disruptions, power system shutdowns, and equipment damage due to electrical power system disturbances. A power quality study is used to...

- Determine compliance with the IEEE 519-Recommended Practices and Requirements for Harmonic Control in Electrical Power Systems guidelines
- Identify most cost-effective solution to power quality problems
- Solve process disruptions due to power disturbances
- Reduce economic effects of poor power quality
- Identify disturbances originating on electric utility system and improvements to reduce the number and severity

Power System Assessment

Square D offers engineering services to meet a variety of power system needs ...

- Basic codes and standards compliance
- Protective coordination assessment
- Maintenance program review
- Recommendations for power system optimization
- Power quality troubleshooting and analysis
- Power factor and harmonics analysis
- Electrical safety hazards
- Short-circuit withstand overview
- Single-line documentation of power system
- Power monitoring recommendations
- Loading measurements

Power System Improvement Projects

Square D offers engineering services for ...

- New equipment installation
- Existing equipment modification
- Ground Fault Schemes for multiple source distribution systems
- High Resistance Grounding (HRG) Conversion
- Automatic Transfer Control Schemes & Generator Operations

Square D professional engineers - safety trained and equipped - will listen to your concerns and goals, define the problem or enhancement, and engineer the solution that best satisfies your needs.

For additional information on power system engineering services and pricing, contact your nearest Square D/Schneider Electric office.

Industrial Energy Efficiency

Schneider Electric Certified Energy Managers (CEM's) work on-site with knowledgeable plant personnel to develop a long-term, comprehensive, "Energy Action Plan", that serves as the blueprint for energy savings. Unlike performance contracts or one-time energy audits, the Total Energy ControlSM program offers a strategic partnership for energy-intensive industrials who want to improve energy efficiency.

- Total Energy Control – Comprehensive integration of all three areas affecting energy efficiency
 - Procurement (electricity and gas)
 - Demand management
 - Optimization of process and plant utilities
- Program deliverables:
 - Long-term Energy Action Plan
 - Energy efficiency projects
 - Ongoing accountability for results

Engineered Solutions

Schneider Electric provides an engineered solution approach to your specific power system applications. Our total solutions for power monitoring and power system controls allow greater safety, reliability, and energy efficiency of your power systems. As a long standing industry leader in Power Monitoring and Control Systems, we understand your power system requirements and needs.

All of our Engineered Solutions are tailored to your specific system requirements. Schneider Electric is your total Solution provider.

Power Monitoring Applications

Increased Reliability and Energy Efficiency

Increased Reliability and Energy Efficiency are key results produced from our Power Monitoring Applications. Schneider Electric power monitoring applications provide detailed reporting, testing and analysis capabilities for your systems and related components.

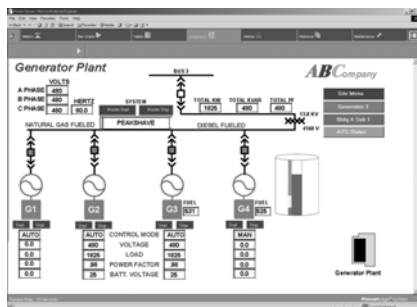

- **EPSS Emergency Power Supply Systems** – The PowerLogic EPSS Test Report provides information regarding the health and status of the emergency power supply system, including automatic transfer switches and generators.
- **SER Sequence of Events Recording** – The PowerLogic Sequence of Events Recorder (SER) Module is a root-cause analysis tool for rapid response for problem resolution that is ideal for pinpointing the cause of a service disruption in very large complex power systems.
- **WAGES Water, Air Gas, Electric, Steam** – PowerLogic energy and power management systems can provide instantaneous readings, alarm notifications, and graphical diagrams for monitoring electrical and piped utilities (Water, Air, Gas, Electric, Steam).
- **APM Active Pager Module** – The PowerLogic Active Pager Module allows automatic paging to alphanumeric pagers, cell phones and PCs.

Power System Control Applications

Automated solutions for increased Reliability and Energy Efficiency

Schneider Electric engineers provide Power System Control Applications with automated solutions for addressing your system reliability and efficiency control needs. Our offer covers Automatic Throwover Schemes, Load Shedding/Peak Shaving, and Load Preservation.

- **Automatic Throwover Systems** – Automatic selection of available utility or generator sources to maintain service continuity to connected loads.
- **Load Shedding/Peak Shaving** – Control peak demand levels or ensure service continuity to critical load or operate breakers in accordance with user specified sequences and time delays such as bringing large motors online across several billing kw demand periods to avoid demand penalties.
- **Load Preservation** – Fast acting sophisticated control systems designed to stabilize critical power systems to the greatest extent possible by monitoring frequency and power sources from utility plus generator capacity versus total circuit load.

PowerLogic Engineers provide graphic solutions for realtime monitoring of power systems.

PowerLogic Engineers specialize in the design and setup of Emergency Power Supply Systems (EPSS).

PowerLogic Engineers design power control systems that meet your operational requirements.

System Integration

System Design and Engineering

Our Square D Engineering Services solution specialists can work with you to design or upgrade your existing system to best achieve your energy and power management objectives and informational needs. With expertise in electrical systems, communications, and automatic control systems, we can integrate, install, and commission your system for optimal performance.

- System Design and Bill of Material Recommendations
- Power Monitoring and Control
- WAGES (Water, Air, Gas, Electric, Steam)
- Enterprise web-based monitoring
- Specification development, drawings, documentation
- Enclosure panel design and build
- Metering Connection Verification/Testing
- Power distribution automation
- On-Site Installation Assistance, Component Configuration & Startup
- Turn-key project management
- Third Party Device and communication interfaces
- Configured Workstations, User Software Interfaces
- Interactive Graphic Design to mimic facility layout, one-lines, equipment status
- Custom Software, Reports & Applications – Billing and Paging

For additional information, contact your nearest Square D / Schneider Electric office.

Factory Assembled Enclosures

Square D® PowerLogic® Factory Assembled Enclosures offer a wide range of designs for metering, communications, and control applications to simplify retrofit installations. Our enclosures are designed to order as a free-standing or wallmounted system. With PowerLogic® Factory Assembled Enclosures, you'll receive professionally crafted, factory tested, pre-wired enclosures that will greatly improve the speed of your system startup. All backed by the Square D® quality standard of excellence.

- Assemblies include meters & devices wired to terminal blocks, disconnects and shorting blocks
- Tailored to any system voltage :
 - 208/120V, 480/277V & 600/347V Wye
 - 240V, 480V & 600V Delta
 - Utilization of PT's required for higher voltage levels
- Wall mountable and easy to install using concealed holes in the back of the enclosure.
- Complete with necessary documentation and mounting hardware for quick and easy installation
- Carbon steel construction, with industry standard ANSI 61 gray powder coat finish
- Equipped with concealed hinged door, and universal pad-lockable latch.
- Custom engraved nameplates available for all units.

Table 4.33: Industrial Enclosure Types 12, & 4, UL & CUL 508A Listed

Available Meter Types	Digital Inputs	Digital Outputs	Analog Inputs	Analog Outputs
PM 810, 820, 850 & 870	Up to 11 / Meter	Up to 7 / Meter	Up to 2 / Meter	Up to 2 / Meter
CM 3250 & 3350	Up to 4 / Meter	Up to 5 / Meter	N/A	N/A
CM 4250 & 4000T	Up to 8 / Meter	Up to 7 / Meter	Up to 1 / Meter	Up to 1 / Meter
ION 6200	N/A	Up to 2 / Meter	N/A	N/A
ION 7300, 7330 & 7350	Up to 4 / Meter	Up to 4 / Meter	Up to 4 / Meter	Up to 4 / Meter
ION 7550 & 7650	Up to 16 / Meter	Up to 7 / Meter	Up to 4 / Meter	Up to 4 / Meter

- Supports Single or Multiple Voltage Sources for Indoor (Type 12) & Outdoor (Type 4) applications
- Available with 1 - 4 meters per panel. Serial & Ethernet Communications are options for all units
- EGX & ION RTU Communication Enclosures with 1-4 devices per panel also available

Light Industrial Enclosure Type 1, UL & CUL 508A Listed

- Available for the following meter types: PM210, PM710, PM820 (with ethernet), and ION6200
- Supports Single Voltage Source only for Indoor (Type 1) applications.
- Available with 1 - 12 meters per panel. Serial Communications are standard for all units.
- No Digital or Analog I/O is available for this option.

Service Entrance/Utility Socket Enclosure Type 3R, UL & CUL 508A Listed

- Available for ION8600 only, with up to 3 Digital Inputs and 4 Digital Outputs
- Supports Single Voltage Source only for Indoor & Outdoor (Type 3R) applications.
- Units are Ring Type with removable cover.
- Available with 1 meter per panel. Serial & Ethernet Communications options available.
- Supports Form 9S, 35S, 36S, 39S and 76S configurations.
- Options available for remote mounted CTs
- Options available for integrated, bar type CTs
- Optional Test Switch.

Additional engineered to order products are available for a wide variety of design solutions.

- Switchgear Transfer Control Panels
- Generator Control Panels
- Load Shed Control Panels
- Sequence of Events Recording (SER) Panels
- Control System Mimic Panels
- Lighting Control Interface Panels
- Programmable Logic Controller (PLC) Control Panels (Hot Standby, Relay Control, Data Concentration etc. ...)
- Emergency Power Supply Systems (EPSS) Control Panels
- Water, Air, Gas, Electrical, and Steam (WAGES) Monitoring Panels
- Input Status Monitoring & Alarming Panels
- Remote Annunciator Control Panels
- Remote Operator Control Panels
- Serial, Ethernet, and Cellular Wireless Systems
- Server Rack and Network Equipment (Servers, Switches, UPS's) for Energy Management Systems.
- Industrialized PC's, Touch Screens (Magelis), and Human Machine Interfaces (HMI's) with Custom System Graphics.
- Designed to fit any environment – Indoor (Type 1 & 12) & Outdoor (Type 3R & 4) applications

For additional information and pricing please contact your local PowerLogic sales specialist or PowerLogic Inside Sales Support at 1-866-466-7627. Enclosure pricing and literature available for download on our website at www.powerlogic.com/products/enclosures.

To better serve you please have the following information on hand when calling.

- Enclosure type (Indoor or Outdoor) and Environment details (Corrosive or Non-Corrosive)
- Power System Voltage Level and Type (Direct Current (DC) or Alternating Current (AC))
- Digital & Analog Input and Output requirements
- Device Type and Quantity per enclosure
- Ethernet and Serial Communication Requirements
- For Drawout Retrofits, need existing cradle type (i.e. GE, Westinghouse, etc.)

There are several ways to receive top quality support on PowerLogic products:

Priority Support: Excellent Service, Free Software Upgrades, Training Discounts & More!

- Latest PowerLogic SMS and ION software upgrades to ensure up-to-date systems
- Direct access to expertise for quick issue resolution
- More efficient PowerLogic SMS and ION system utilization
- Higher reliability
- Improved productivity and personal efficiency on the job

Priority Support: Tenant Metering

Now the great support provided to SMS and ION systems is now available for Tenant Metering systems. Support includes ...

- Direct email (4-hr response time) and toll-free 800 number support for prompt response to urgent or non-urgent requests from highly trained support engineers.
- Hours of service 7:30am to 7pm US Central time
- PowerLogic® Tenant Metering software upgrades at no charge
- Proactive notification of software service packs and fixes
- Remote diagnostics support engineer can troubleshoot any issues of the TMS system remotely without the customer's help.

Premium Support: Priority + Proactive System Checks + Sr. Technician Assigned to your site

Choose Premium Support when you need to ...

- Enhance your PowerLogic SMS and ION system's operation with single-sourced pro-active problem identification, solutions recommendations and change management skills
- Partner with technical experts who help coordinate support, provide hands-on assistance, and share knowledge and know-how with you
- Obtain personalized services tailored to your business environment and objectives
- Take advantage of remote software upgrade capabilities
- Anticipate and communicate necessary change

Additional Support Options:

7x24 Support Option

- PowerLogic 7x24 support provides 1-hour phone response by senior support engineer during off-hours.
- Additionally, 4-hour response (max) for remote connection to customer system for advanced troubleshooting.

Real Time Maintenance Option

Real time maintenance provides real-time server monitoring to proactively alert assigned PREMSUP engineer of any issues immediately.

On-Site Maintenance Option

On site maintenance includes pre-scheduled visits by PowerLogic system engineers who perform software upgrades, updates to custom graphic screens, device firmware upgrades, and system performance analysis and correction. Scope of work is determined by customer request.

Power Management University

Our training centers offer a variety of training courses designed to improve your total energy management skills. Our instructor led courses are 70% hands-on, with each student having their own lab workstation. We have two main training centers located in Nashville, TN and Victoria, BC and offer training at a variety of Square D sites across the US and Canada.

Series 40
Advanced Display
(A Suffix)

Series 20
Advanced Display
(A Suffix)

80, 40, and 20 Series

The Sepam family of digital protection relays, Series 20, 40 and 80, is the newest generation of Sepam relay, a time tested product with a 20-year worldwide history. Modular relay design allows quick and easy future upgrades to communications, digital I/O, analog output or temperature acquisition. The 64x128 bit, graphic LCD display and keypad permit relay setting of Series 20 and 40 without a PC. Comprehensive self-testing provides assurance of readiness to protect. The Sepam family also has exceptional withstand to environmental electromagnetic disturbances. An optional 128 x 240 LCD display for the Series 80 relay can show an animated one-line with front panel control.

Table 4.35: Quick Select Guide

		Feeder or main (Substation)	Transformer	Motor	Generator	Bus	Capacitor Bank
Criteria	Selection						
Network structure	Radial (51, 51N, 46)	S23	T23	M20	G40	B80	C86
	Long feeders (67N)	S41		M41			
	Closed loop (67N, 67)	S42					
	Parallel mains [transf] [sources] (67N, 67)	S42	T42		G82		
	Sync-check required (25)(67N, 67)	S82	T82		G82	B80	
Grounding system	Solid or low/high impedance (51N)	S23	T23	M20	G40		
	Ungrounded or compensated (67N/NC)	S41	T42	M41	G82		
Protection	Basic Feeder [Transf][Motor]	S23	T23	M20	G40		
	Voltage/frequency (27/59/81)	S40	T40	M41	G40	B21	
	ROCOF (81R)	S84				B22	
	Advanced Fdr/Main[Transf] [Motor][Gen]	S41	T82	M81	G82	B83	
	Thermal overload (49)-cable	S81

	Machine-transformer unit differential			M88	G88		
Metering	I	S23	T23	M20			
	V, f					B21	
	I, V, f, P, E	S40	T40	M41	G40	B80	
	I, V, V, f, P, E					B83	
	I, I, V, F, P, E		T87	M87	G87		
Temperature	THD-I, THD-V	S80	T81	M81	G82	B80	
	<8 RTDs of same type		T23	M20	G40		
I/Os	> 8 RTDs (< 16) or 2 types of RTDs		T40	M41	G40		
	< 10 I / 8 O	S23	T23	M20	G40	B21	
Program logic customization	> 10 I / 8 O and < 42 I / 23 O	S80	T81	M81	G82	B80	
	Control matrix	S23	T23	M20	G40	B21	
	Logic equation editor	S40	T40	M41	G40	B80	
Modbus communication	Ladder-logic software	S80	T81	M81	G82	B80	
	1 Modbus port	S23	T23	M20	G40	B21	
	2 Modbus ports	S80	T81	M81	G82	B80	

Note: Units in table depict least complex device types compliant with criterion.

Sepam Series 80 Relay Features

- Standard footprint for enhanced protection of Mains/Feeders, Transformer, Motor, Generator, Capacitor, Bus Applications
- Differential protection of transformer or machine transformer units
- Differential protection of motors and generators
- Protection for mains and ties and important feeders including pre-programmed transfer schemes
- Increased metering capabilities I, V, E, P, PF, THD, vector diagram
- Expanded logic equation capabilities (an option for Logipam PLC ladder logic)
- Setting software with graphical assistance, optional mimic-based display
- Battery backup for historical and fault waveform data retention, wide range DC control power
- Two rear communication optional
- Includes all Series 20 and Series 40 features

Sepam Series 40 Relay Features

- Compact standard footprint (< 4" deep) for enhanced protection of Mains/Feeders, Transformer, Motor, Generator Applications
- Directional overcurrent protection for dual mains and ties and closed loop feeders
- Current and voltage inputs I, V, E, P, PF
- Setting software with Boolean logic equation assistance
- CT/VT and Trip Circuit supervision
- Sixteen seconds of fault recording, last 5 trip reports, and last 200 time-tagged alarms
- Rear communication port for interface to optional communications modules
- Includes all Series 20 features

Sepam Series 20 Relay Features

- Backlit LCD graphic bitmap display
- Compact standard footprint (< 4" deep) for basic protection of Mains/Feeders, Transformer, Motor, Bus (Voltage) Applications
- 16 inverse time overcurrent characteristic curves
- Setting software with offline file creation and download to relay
- Two 86 cycle records of fault recording, last trip fault values, and last 64 time-tagged alarms retained
- Provides trip diagnostic information for analysis of faults
- Self-test diagnostic ensures correct operation of relay and integrity of protection
- Wide range of control power inputs
- Display operation minimal training required for operation.
- Application specific design for Main/Feeder, Transformer, Motor, Bus (Voltage) zones
- Zone selective interlocking (ZSI) improved protection coordination
- Rear communication port for interface to optional Modbus communications modules, plus dual port module, optional protocols DNP3 and IEC60870-5-103, and also fiber optics
- Modular architecture
- Breaker diagnostics
- Two groups of current protection settings (logic input selectable) to allow reduced arc-flash hazard during maintenance operation

Low Voltage Fixed Capacitors

Fixed Capacitors are best suited for use on electrical systems with no voltage or current harmonics.

ReactiVar[®] fixed low voltage capacitors are ideally suited for power factor correction applications where the load does not change or where the capacitor is switched with the load, such as the load side of a motor starter. ReactiVar fixed capacitors are best suited for applications where there are no harmonic currents or voltages present.

Features:

- **Environmentally friendly:** ReactiVar capacitors are constructed with a dry type metalized polypropylene capacitor element with no liquid dielectrics. There is no risk of fluid leakage or environmental pollution and no need for a drip pan.
- Higher overvoltage limit on Super Duty model which is suitable for lightly polluted network.
- **Low Loss, Long Life:** The design features less than 0.5W/kVAR losses, including discharge resistors.
- **Attractive finish:** Capacitor units feature a textured powder paint finish, ASA 61 gray. Units are constructed of 14 gauge steel and are suitable for floor or wall mounting.

Application Note: Capacitors are a low impedance path for the harmonic currents produced by variable frequency drives, motor soft starters, welders, computers, PLCs, robotics and other electronic equipment. These harmonic currents can be drawn into the capacitor causing it to overheat, shortening its life. Furthermore, the resonant circuit formed by shunt capacitors coupled with system inductances (motors and transformers) can amplify harmonic currents

and voltages in the electrical network. This amplification can cause nuisance fuse operation and/or damage to electrical equipment including capacitors and other electronic devices. If power factor correction in the presence of harmonics is required, please contact your nearest Square D/Schneider Electric sales office for assistance.

▲ Consult local electrical codes for proper sizing of molded case circuit breaker frame or disconnect switch rating.

■ Unit size 1, 2 and 3 can be wall mounted. Order PFCDBR2 mounting bracketed separately.

◆ Refer to table 4-45 for dimensions.

★ Conductor should be copper and rated 90° C min. Refer to local electrical codes for proper wire size.

LV Fixed Fused Capacitors with Blown Fuse Indicators

In addition to the comprehensive Multiple Protection System designed into the New ReactiVar® fixed, low voltage capacitors, fused units feature a fast acting current limiting fuse in each phase. Blown fuse indicators are included as standard on indoor (NEMA Type 1) enclosure. While fuses are not required to protect the capacitor elements, external over current protection may be required by the local electrical code for protection of the conductors feeding the capacitors. Consult your local electrical code for installation instructions.

The AV4000 and AV5000 are suitable for use where harmonic generating loads are less than 15% of the total connected load.

Low Voltage (LV) Standard Automatic Capacitor Banks with Main Lugs or Main Breakers

The AV4000 and AV5000 standard automatic power factor correction banks are designed for centralized power factor correction to supply varying amounts of reactive power required to compensate for changing load conditions. The AV4000 and AV5000 banks are ideally suited for facility electrical distribution systems with TDD (total harmonic current distortion) $\leq 5\%$ and THD(V) (total harmonic voltage distortion) $\leq 3\%$. An advanced microprocessor-based reactive power controller measures plant power factor via a single remote CT. Plus, it switches capacitor modules in and out of service to maintain a user-selected target power factor.

Application Assistance:

The Schneider Electric Power Quality Correction Group provides engineering assistance for the application of capacitors in harmonic rich environments. Specialists at Schneider Electric can assess the likelihood of application problems and arrange for more detailed study if required. Solutions can include computer modeling and system simulation. Our application engineers can make all the arrangements for system studies, custom engineering, installation and commissioning, as required by the application. Contact Schneider Electric sales office for detail equipment quotation assistance.

For dimension reference, see page 4-33.

Main Features:

- Modular construction; free standing QED switchboard enclosures contain up to 500 kVAR per section and allow for easy future expansion
- Standard offering available up to 400 Kvar at 208/240 Vac, 1000 kVAR at 480 or 600 Vac
- Main lugs or main breaker section at your choice
- Dry capacitor element design eliminates risk of fluid leakage, environmental hazard and drip pans
- Capacitor rated contactors are designed specifically for the switching of capacitive currents and feature a patented capacitor precharge circuit that exceeds air-core reactor transient dampening
- Three different microprocessor controller options provide a choice in functionality and control sophistication
- Backlit display on controller displays actual PF, alarms, number of steps energized and much more
- Rugged design — units are constructed with removable steel panels over heavy gauge steel frame
- Available in Type NEMA 1 indoor and NEMA 3R outdoor enclosures
- Indoor units are finished with ASA 49 grey textured paint finish
- For application up to 200 kVAR max., 480 V (main lugs, top entry only), the AV4000 offers compact and cost effective alternative.

Equipment specification:

Voltage:	240, 480, 600 Vac standard, 208, 380, 415 Vac available
Kvar rating:	up to 1000 Kvar (depending on voltage rating)
Ambient temperature:	-5°C to 46°C
Average temperature limit:	<45°C within 24 hours, <35°C over 1 year
Elevation:	≤ 1800 meter
Humidity:	0-95% non-condensing
Overvoltage limit:	110% maximum
Withstand test level:	2.15 times rated voltage or 1000 V, whichever is higher for 10s
Overcurrent limit:	130% maximum
Incoming:	Top (standard), bottom, side.
Main lug:	Mechanical standard, compression optional
Main breaker:	PowerPact® with Micrologic® trip unit. LI standard, LSI available
Enclosure rating:	NEMA 1 standard, N3R available
Color:	ANSI 49 standard, ANSI 61, ANSI 70 optional

CT Selection Guide for Class 5830, 5860, 5870 and 5880

The current transformer is located on a phase A bus or cable at the main service entrance as illustrated in Diagram 1. The CT should be sized for the maximum load current. The CT should be installed upstream of the capacitor bank and plant loads to measure the combined current.

CT catalog number: TRAI••••SC♦ ♦ where •••• is current rate code of bus/cable and ♦ ♦ is window size code. Codes are listed in table 4.46.

e.g. TRAI1000SC07 is a CT for 1000 A bus with 7"x4" window.

Table 4.46:

Low Voltage Anti-Resonant and Filtering Automatic Capacitor Banks with Main Lugs and Breaker

Reactive® AV6000 anti-resonant and AV7000 harmonic filtering automatic switched capacitor banks are specifically designed for networks containing harmonic energies which would otherwise damage standard fixed or automatic capacitor banks.

The problem: Harmonics are a natural by-product of non-linear loads such as variable frequency drives, motor soft starters, welders, uninterruptible power supplies, robotics, PLCs and other electronic devices. Harmonics introduce higher-than-60 Hz current and voltage components into the electrical distribution system. Capacitors are a low impedance path for these higher frequency components and thus will absorb these harmonic energies. Combinations of capacitors and system inductances (motors and transformers) can form series and parallel tuned circuits which can resonate at certain frequencies. The harmonics produced by non-linear loads can excite a standard capacitor bank into resonance. The resonance can magnify currents and voltages, causing system wide damage and equipment failure. This problem is growing in prevalence.

The solution: Anti-Resonant Automatic Switched Capacitor Banks

The AV6000 anti-resonance capacitor bank's primary function is power factor correction. Iron core reactors are added in series with the capacitor modules. The 3 phase reactors are custom designed and manufactured at our factory under tight tolerance specifically for the AV6000. The reactors tune the bank below the first dominant harmonic (usually the 5th, or 300 Hz). Below the tuning point, the system appears capacitive and thus corrects power factor. Above the tuning point, the system appears inductive and thus resonance is minimized. The AV6000 design has the added advantage of removing up to 50% of the 5th harmonic to reduce overall voltage distortion.

Harmonic Filtering Automatic Switched Capacitor Banks

The need for an AV7000 is usually determined by a power quality specialist. Although the AV7000 looks identical to the AV6000, its primary function is harmonic mitigation, with power factor correction being a secondary benefit. The distinction between an AV6000 and an AV7000 is the tuning point. By definition, if the tuning point of the capacitor/reactor combination is within $\pm 10\%$ of the target harmonic it is intended to absorb, it is referred to as a filter. If the tuning point is outside the $\pm 10\%$ limit, it is referred to as an anti-resonant system. As the tuning point of the system approaches the target harmonic, its effectiveness at absorbing increases. Hence, the need to classify its functionality. The PQc group should always be consulted prior to recommending it to customers.

Main Features

- Standard offering available up to 1200 kvar at 480 or 600 Vac
- Capacitor modules are designed with higher than standard voltage and current ratings to provide long life on systems with high harmonic energies. Reactors are designed to operate at 115°C rise over a maximum 40°C ambient temperature.
- In addition to the standard features provided in the AV5000 systems, the reactors in the AV6000 have an embedded thermistor temperature detector. The stage will shut down and annunciate if the reactor should overheat, usually a result of excessive harmonic energies

Application Assistance

The Schneider Electric Power Quality Correction Group provides engineering assistance for the application of capacitors in harmonic rich environments. Specialists at Schneider Electric can assess the likelihood of application problems and arrange for more detailed study if required. Solutions can include computer modeling and system simulation. Depending on the network, the solution may include de-tuned banks (AV6000) or fully filtered banks (AV7000). Our application engineers can make all the arrangements for system studies, custom engineering, installation and commissioning, as required by the application. Contact Schneider Electric sales office for detail equipment quotation assistance.

For dimension reference, see page 4-33.

Equipment specification:

Low Voltage Transient Free Reactive Compensation Capacitor Banks

Square D® ReactiVar® Transient Free Reactive Compensation (TFRC) anti-resonant (A/BT6000) Systems and filtering system (A/BT7000) are ideally suited for use on electrical systems where connected equipment is extremely sensitive to variations in the supply voltage.

The problem: Capacitor systems featuring electromechanical contactors generate Voltage transients on the electrical network when switching capacitor stages on/off, even when current limiting or tuning reactors are employed. Transients can impair the operation of sensitive equipment, including programmable logic controllers, variable speed drives, computers and UPS systems. In sensitive networks such as hospitals, data processing centers, airports and many manufacturing environments, any transient, however slight, may not be acceptable.

The solution: TFRC systems feature an advanced controller to precisely activate electronic switching elements to connect capacitor stages and avoid the creation of transients. Transient free switching also reduces wear on capacitors due to switching and will result in longer life for the overall capacitor system. With a response time of less than ten seconds to load changes, TFRC systems reduce the kVA demand on the transformer and will eliminate utility imposed penalties for low power factor. Depending on the level of harmonic producing (non-linear) devices on the network, two TFRC systems are available: the AT6000 anti-resonant (de-tuned) system and the AT7000 filtered system. Non-linear loads include variable speed drives, UPS systems, soft starters and other power electronic devices. The anti-resonant system will absorb up to 50% of the fifth harmonic current while the filtered system will absorb up to 80% of the fifth harmonic current, improving overall network conditions.

Main Features:

- Standard offering up to 1350 Kvar at 480 or 600 Vac
- Transient free switching of capacitor steps
- Electronic switching elements yield an unlimited number of switching operations
- Three different microprocessor controller options provide a choice in functionality and control sophistication
- Backlit display on controller displays actual PF, alarms, number of steps energized and much more
- Heavy duty dry capacitor element design provides no risk of fluid leakage, no environmental pollution and no need for drip pans
- The Reactors have an embedded thermistor temperature detector. The stage will shut down and annunciate if the reactor should overheat, usually a result of excessive harmonic energies
- Units are constructed with removable heavy duty steel panels over a 12 gauge steel frame.
- Indoor Type 1 units finished with ASA 49 gray polyester paint. Other colors available.

Application Assistance

The Schneider Electric Power Quality Correction Group provides engineering assistance for the application of capacitors in harmonic rich environments. Specialists at Square D can assess the likelihood of application problems and arrange for more detailed study if required. Solutions can include computer modeling and system simulation. Our application engineers can make all the arrangements for system studies, custom engineering, installation and commissioning, as required by the application. Contact Schneider Electric sales office for detail equipment quotation assistance.

To facilitate application assistance, please have the following information available:

- 12 months of utility billing information
- A single line diagram of the network showing the nature of loads (e.g. 150 hp FVNR starters; 200 hp VFD; etc.)
- Transformer(s) kVA rating and percent impedance (%Z)
- Primary & secondary voltages
- Location of utility metering
- Size, type and location of any existing capacitors

For dimension reference, see page 4-33.

MVC systems are suitable for power factor correction of steady harmonic-free motor loads.

Power factor correction, harmonic mitigation, and voltage support in medium voltage electrical systems. Custom engineered for steady and rapidly fluctuating loads.

ReactiVar® Medium Voltage Fixed Power Factor Capacitors

The ReactiVar MVC fixed capacitors are ideally suited for power factor correction in applications where the load does not change or where the capacitor is switched with the load, such as the load side of a motor contactor. ReactiVar capacitors are available up to 300 kVAR as individual units, and up to 600 kVAR in banks. Unfused or fused (2 fuses) assemblies are available. Other ranges available upon request.

Features:

- Fused and unfused applications
- Standard rating up to 600 kVAR, 4800 V (for specials, consult factory)
- Metallized polypropylene film capacitors for low dielectric loss
- Internally mounted discharge resistors
- Operating temperature range of -25°C to +45°C
- Built to applicable NEMA, IEEE, and IEC standards
- Available in indoor (Type 1/12) and outdoor (Type 3R) enclosures
- Painted ASA 61 gray

Lead time: 12–14 weeks typical (consult factory for committed delivery)

Prices & assistance: Call PQc Group at (905) 678-6699 or email pqc@ca.schneider-electric.com

MV5000 systems are suitable for use where harmonic generating loads are less than 15% of the total connected load.

MV6000 systems are suitable for use where harmonic generating loads are less than 50% of the total connected load.

MV7000 systems are suitable for use where harmonic generating loads exceed 50% of the total connected load.

MVHVC High-Speed compensation systems are designed for compensation of rapidly fluctuating loads

ReactiVar Medium Voltage Metal Enclosed Automatic Capacitor Banks (MV5000/MV6000/MV7000)

The ReactiVar medium voltage automatic capacitor banks are ideally suited for centralized power factor correction and/or harmonic filtering in applications where plant loading is constantly changing, resulting in the need for varying amounts of reactive power. All MV capacitor systems are a custom-engineered to meet project specific application and installation needs.

Features:

- Standard metal enclosures available up to 20,000 kVAR, 5/15 kV, 50/60 Hz
- The Square D HVL load interrupter switch (fused or unfused)
- Externally fused Merlin Gerin PROPIVAR (or equivalent) or Cooper capacitors with excellent life due to high temperature withstand, small temperature rise, chemical stability, overvoltage and overcurrent withstand. (Internally fused capacitor available upon request)
- Three-bushing capacitor cells connected in delta available up to 5 kV. Two-bushing capacitor cells connected in ungrounded wye for higher voltages
- Current limiting capacitor fuses with blown fuse pop-up indicators
- current limiting reactors in multistage-step MV5000 standard systems to limit high capacitor inrush currents
- Iron core reactors in MV6000 de-tune banks to prevent parallel resonance
- Heavy-duty iron core reactors in MV7000 filtered banks for effective 5th harmonic filtering.
- Available in Type 1 indoor and 3R outdoor enclosure types
- Key interlocking system forces sequential operation of the controls, non-load break switch (or circuit breaker) and ground switches
- Superior Square D Varlogic™ microprocessor based power factor controller
- The Merlin Gerin SEPAM protective relaying.

Lead time: 16–20 weeks typical (consult factory for committed delivery)

Prices & assistance: Call PQc Group at (905) 678-6699 or email pqc@ca.schneider-electric.com

The problem:

High levels of harmonics generated by non-linear loads can have significant negative impact in the facility electrical system. It can cause malfunction of the equipment, disrupt plant operation, thus, resulting loss of productivity.

Harmonic filtering:

The AccuSine Power Correction System (PCS) is Active Harmonic Filter (AHF) which actively injects opposite harmonics current on the source side of the load and it:

- Decreases harmonic related overheating of cables, switchgear and transformers
- Reduces downtime caused by nuisance thermal tripping of protective devices
- Increases electrical network reliability and reduces operating costs
- Corrects to the 50th harmonic, reduce harmonics level to meet IEEE 519, IEC 61000 3-4, and UK G5/4-1 standards.
- Compensates entire network or specific loads depending on installation point

Power Factor Correction and Dynamic VAR Compensation:

AccuSine PCS features a 100 microsecond response providing for dynamic VAR injection to reduce voltage sags created by inductive load switching. In addition, AccuSine PCS can inject peak current at 2.25 times its rms current rating for 3 cycles. AccuSine PCS can also operate in a dual mode where current is first injected to reduce harmonics and any excess current capacity is used to improve the power factor.

Other Features:

- Independent phase compensation
- UL, CE, ABS, and CSA approved
- Parallel connection allows for easy retrofit and installation of multiple units for large networks
- Response to load fluctuations begins in 100 microseconds with 1/2 cycle for full response to step load changes
- 50, 100 and 300 A models for 208–480 V. Other voltages available.

Accusine PCS Sizing

For proper sizing of AccuSine units, contact the Schneider Electric Power Quality Correction Group at (905) 678-6699. To expedite the product selection process, please have a single line diagram and/or details of the application including sizes of transformers, non-linear and linear loads, and any existing filters and capacitors.

 ■ Dimensions and weights are approximate. Do not use for construction. For actual dimensions, contact your nearest Square D/Schneider Electric sales office.
 ◆ CE Certified units meet EMC Directive 89/336 EEC.
 ★ Floor standing units include a door-interlocked main disconnect.
 ▼ C = 380-415 V fan, D = 480 V fan.

NOTE: Refer to Table 4.48 on page 4-36 for CT details.

The Hybrid VAR Compensator (HVC) is ideally suited for industrial facilities with power quality or production problems caused by rapidly changing load demands typical of highly cyclical loads such as welders, mining conveyors and heavy stamping machines.

The problem:

Traditional capacitor systems have a minimum response time of five to ten seconds for load fluctuations. As a result of this limitation, uncompensated faster loads can produce voltage instability, voltage flicker, increased losses and poor power factor which reduces the electric supply capacity. Problems can often be seen inside the facility, on the utility feeder to the facility or in neighboring facilities. Problems can include:

- Poor weld quality or reduced weld line productivity (due to restrikes or interlock weld controls)
- Failure to start motor loads (due to voltage sag on startup)
- Undervoltage tripping of sensitive loads (Robots, PLCs, VFDs)
- Lighting flicker and/or HID lighting shutdown
- Overloaded distribution equipment (cyclical current pulses may exceed the rated current of the distribution equipment)
- Poor power factor and associated utility demand charges
- High harmonic levels

Ultra-Fast Reactive Power Solution:

- The Hybrid VAR Compensator is ideally suited for power factor correction and voltage sag support in many applications where conventional systems are not suitable:
- One cycle or less for full response
- Infinite VAR resolution
- Compensates for large inductive inrush currents
- Transient free compensation
- Improves voltage regulation
- Reduces flicker

HVC systems can alleviate any of the problems created by cyclical loads that require large amounts of reactive power for short duration.

Unique, cost-effective construction:

HVC systems couple a detuned capacitor system (fixed, contactor or power electronic switched) with the AccuSine® Electronic VAR Control (EVC) unit. The Accusine EVC is able to inject leading or lagging VARs to provide variable compensation over the operating rating. For example, coupling a 500 kVAR fixed detuned bank with a 300 A Accusine EVC yields an HVC that can provide reactive compensation between 250 kVAR and 750 kVAR.

Custom Designed Solution:

Sizing of the HVC will often require a site visit by Schneider Electric Power Quality Correction Group technicians to take real-time measurements of the network. Please contact the PQC group at (905)678-6699 or email pqc@squared.com

Round Split-Core Selection:

Three CT's required for networks with line-neutral loads. Two remote current transformers required for three phase loads. For installations requiring parallel connection of multiple AccuSine for increased correction capacity, special considerations may be required. Contact the Schneider Electric Power Quality Correction Group for details.

Table 4.48:
