

General Installation for all Spot Detectors

Determine a location. Ram set 6/32 threaded studs in floor on 2.5 inch (63.5mm) centers. Place SD over studs and secure. Adjust the sense probes to desired height.

SD – Spot Detector

Installation

Connect the white/red and black leads to the FMS, F-Series RA1x2 or LDRA6 panel. Test the SD by placing water under the sense probes. *Note: Powered by RLE products only.*

SD-Z – Zone Spot Detector

Installation

Connect the SD-Z to the LD control panel by connecting the two cable connectors to SeaHawk Water Leak Detection Cable (SC), or SeaHawk Non-Sensing Cable (NSC), or an end-of-line terminator (EOL). Test the SD-Z by placing water under the sense probes. SD-Z simulates 50 feet (15.24m) of SC cable: 25 feet in and 25 feet out (7.62m in/out) from device.

SD-Z1– Zone Spot Detector

Installation

Connect the SD-Z1 to the LD control panel by connecting the four conductor cable to the cable interface terminal block. Test the SD-Z1 by placing water under the sense probes. SD-Z1 simulates 50 feet (15.24m) of SC cable: 25 feet in and 25 feet out (7.62m in/out) from device.

SD-RO1 – Spot Detector with Relay Output

Installation

Connect the white (N/O) and green (Com) or blue (N/C) leads to the alarm device. Connect the black (-) and red (+) leads to the power source. Test the SD-RO1 by placing water under the sense probes.
